

# **Introduction**

## **System Analysis**

### **Similar platforms**

## **Development**

### **Hardware**

#### **Microcontroller**

#### **Sensors**

- Overview & Considerations

- IMU

- Encoders

#### **Actuators**

- Overview & Considerations

- Motors

#### **Main structure**

- CAD Design

- Material Choices

- Manufacturing Method

## Electronics

- System Diagrams

- Microcontroller Mount

- Connectors, Wires & PCBs

## Power

- Batteries & Battery Holder

- Power requirements

## Final Assembly

- Fastener Choices

- Assembly Strategies

- Assembled Robot

## Software

### Development strategy

### Implemented Functionality

- Balance mode

- Position hold

### Software architecture

- Software modules

- Final Structure

# Testing

## Testing strategy

Overall approach

Testing equipment

## Test descriptions

### Circuit Test

PCB Tests

Wiring harness tests

### Encoder Test

### Screen Test

### IMU Test

### Motor & Motor Driver Test

### PID Tests

## Future Development

## Current Issues

### Encoder inaccuracy

Issue

Solution

## IMU mounting

Issue

Solution

## Robot structure & assembly

Issue

Solution

## Motors

Issue

Solution

## Future Improvements

### Hardware

LiDAR Sensor

asddasasfdad

Sonar Sensor

Radio Control

### Functionality

Implementing GUI interface

Adding direction control

Collision Avoidance  
Environment mapping using SLAM

**Possible use-cases**
